The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 & 9-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over PAJ (10-113145).

This reference was cited as an X reference in an international search report. PAJ discloses treating pan-fried seasoning that is added to a wok or a frying pan to season the foods while heating. The product reduces splashing of fat, oil and moisture during cooking. The composition is an o/w emulsion containing 10-50% fat, 0.03-0.3 wt% emulsifier having an HLB of greater than or equal to 7, a viscosity of 1000-7000 centipoises at 20 C and an average oil drop particle size of less than or equal to 30 um. The selected emulsifiers include glycerol fatty acid ester, monoglyceride, sorbitan fatty acid ester and enzyme decomposition of lecithin (see abstract). In the machine assisted translation at paragraph 007 of the detailed description, polyglycerol fatty acid ester or sucrose fatty acid ester is a suggested emulsifier, as required in claim 3. 0-10% biopolymer is disclosed as an ingredient in paragraph 0020 of the detailed description.

Claim 1 appears to differ from the reference in the recitation of the specific Bostwick value of the product but the Bostwick value is known in the art to be a measure of how pourable the composition is. Since the composition of PAJ is used as a seasoning for pan-frying or stir-frying, one of ordinary skill in the art would have expected it to be pourable. Although DATEM is not one of the specific emulsifiers used in PAJ, no unobvious or unexpected results are seen from the selection of this specific emulsifier because the emulsifiers in PAJ show the same utility as that described by applicant. It is appreciated that the pH of the composition is not mentioned but the pH range selected is a range typically found in foods. No claim is allowed.
